Gobi Labs **Microbial Contaminant Report**

Manifest:	0004701315	Report No:	M-4701315-V1

Facility Address:	9870 Vermillion Rd Site #4, Longmont, CO 80503	Method Reference:	MB-OP-02, MB-OP-03, MB-OP-05

Scope

Contaminant testing for the identified pathogens Salmonella spp. and Shiga Toxin Virulence Genes, 026,045, 0103, 0111, 0121, 0145 and 0157:H7 serogroups of *Escherichia coli* (STEC) was performed through Polymerase Chain Reaction (PCR) presumptive experimentation, and confirmed through cultural methodology where applicable. Results for Salmonella spp. and STEC are represented as a negative or positive determination, a negative result indicating no detection of the respective contaminant.

Total Yeast and Mold Count (TYMC) was determined through 3M TM Petrifilm TM Rapid Yeast and Mold plating technology. The TYMC is represented as a count in colony forming units per gram (cfu/g), where a total count greater than or equal to 10,000 cfu/g constitutes a failed result, and anything less than 10,000 cfu/g constitutes a pass. For TYMC reporting, "less than" or "greater than" symbols may be used to represent results. They can be understood as the following:

- <100 = less than 100 cfu/g = insignificant growth observed, pass
- <10,000 = less than 10,000 cfu/g = growth observed, pass
- >10,000 = greater than 10,000 cfu/g = growth observed, fail

A sample must pass all three tests to pass overall Microbial contaminant testing. In the event that a sample fails any of the Microbial contaminant tests, the result will be bolded and shown in red font. Please do not hesitate to contact us with any questions.
